

KRAFTY KOW SUPPLIES COMPANY

Cup Turner

Thank you for purchasing the patented Cup-A-Saurus® cup turner by Krafty Kow! It only takes a few minutes to be up and running!

Attaching the Legs

In the packaging, you'll find two end caps with screws. Turn the turner upside down and attach a leg to each end. The turner will fit into the box part of the leg. Use the included screws to attach the legs. Make sure the turner is flat, and at the top edge of the legs, before you attach the screws. If the legs are attached uneven, the turner will wobble. Please don't over tighten screws.

Attaching the Spindles

Each spindle is $\frac{3}{4}$ " PVC with a custom adapter to fit the knob on the turner. When attaching the spindle to the turner, do not use anything but your fingers to tighten the thumb screws. Over tightening can damage the knob and isn't necessary for the spindle to stay secure.

Start Up

You may hear a clicking when you first start the turner. This is normal and should go away in a few minutes. Occasionally the motor will not start. This is normally due to a safety feature where the motor stops if it is bound up. During shipping, it may get tossed about and THINK it's stuck. All you have to do is manually turn one of the spindle knobs to give it a "kick start".

Foam

Your turner comes with Foam-Tastic which is a specialized foam exclusively made for Cup-A-Saurus turners. We have a YouTube video demonstrating the product, but it's pretty self explanatory. Just slip it on to the PVC - squeeze it to fit in your cup! It will expand to the size of your cup and you're ready to go. Tip: If the foam sticks out of the cup, you may want to first wrap it in plastic wrap to protect it from epoxy. Also, make sure it's even, inside of your tumbler, on all sides to ensure a level spin.

Word of Caution!

This turner has plastic parts inside and out. Exposure to temperatures about 120 degrees will cause damage and will void the warranty. Please use caution when using heat guns or space heaters. Do not apply direct heat to the turner itself or enclose in a space that will rise above 120 degrees.

We are dedicated to providing quality products and service so if you're not completely satisfied, please let us know.
