

KRAFTY KOW SUPPLIES COMPANY

Motor Replacement

Motors don't last forever so in the event you need to replace the motor on your Cup-A-Saurus® cup turner, it's easily done because of the motor bracket we built into the turner. Follow these easy steps to make the replacement.

1. Make sure motor is off and unplugged. Remove the 4 screws on the motor bracket.
2. Gently pull the motor out and away from the turner. You may have to rotate it slightly.
3. Grasp new motor and attach to drive shaft coming from the motor. You may have to rotate slightly back and forth to align. Don't force.
4. If you can't get the motor to go on completely, hold one of the spindles and rotate slightly while putting the motor on to the shaft.
5. When motor is aligned and on, use the same screws from the old motor for the bracket.
6. Turn the motor on and make sure all spindles are rotating properly.

Remember, that you can use any rotisserie motor for the turner. They can be purchased from the Cup-A-Saurus® website which will include a motor bracket already attached or you can make your purchase at Lowe's, Walmart etc. If you purchase from somewhere other than Cup-A-Saurus®, follow these steps.

1. Remove motor from turner as described above.
2. Remove screws holding motor bracket to motor.
3. Remove corresponding screws on new motor.
4. Attach motor bracket to new motor (line up screw holes and large drive hole)
5. Attach motor to turner as described above.
